

# Fittings and Tubing

## Low Pressure "Speedbite", Single Ferrule to 15,000 psi (1034 bar)

Includes Check Valves, Filters & Couplings

### Principle of Operation:

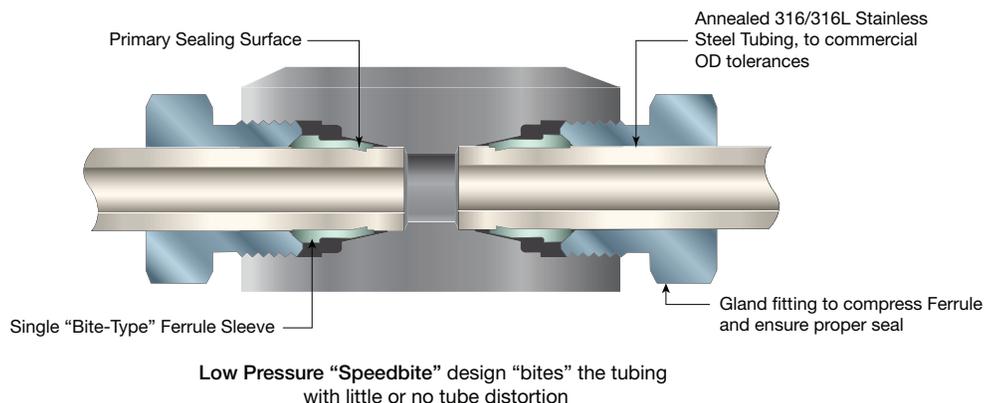

Parker Autoclave Engineers Low Pressure "Speedbite" and "Mini" Series fittings are designed to work with 10V/SW Series and Mini Series Low Pressure Valves as well as Low Pressure Tubing made of commercially sized 316/316L SS in the "Annealed" condition. Pressures to 15,000 psi and sizes from 1/16" to 1/2" are readily available.

The Speedbite connection is a single-ferrule bite-type compression fitting engineered for use with tubing designed by Parker Autoclave Engineers to a controlled hardness. Speedbite fittings employ a bite-type compression style single ferrule that is manually tightened.

### Low Pressure Fittings and Tubing Features:

- Single-ferrule compression sleeve connections for up to 15,000 psi MAWP
- Operating temperatures from -100°F (-73°C) to 650°F (343°C)
- Fast easy 1-1/4 turn make-up of connection
- Available sizes are 1/16", 1/8", 1/4", 3/8", and 1/2"
- Fittings manufactured in accordance with ASME B31.3 Chapter IX standards with UNS S31600 316 SS material cold worked to Parker Autoclave proprietary standards (optional material available).
- Tubing manufactured to commercial OD tolerances ASTM A269 dual rated 316/316L material to a controlled hardness to facilitate proper ferrule bite.
- Molybdenum disulfide-coated gland nuts to prevent galling

All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability.

ENGINEERING YOUR SUCCESS.

# Fittings and Tubing

Low Pressure Fittings - Pressures to 15,000 psi (1034 bar)

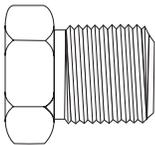

Each fitting or adapter uses UNS S31600 cold worked 316 Stainless Steel and are manufactured in accordance with ASME B31.3 Chapter IX standards. (Optional Materials available, contact factory for selection).

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

## Connection Components:

All valves and fittings are supplied complete with appropriate glands and compression sleeves. To order these components separately, use order numbers listed. When using plug, ferrule sleeve is not required. Tubing pressure caps can be found in Adapter Brochure.

**Gland**  
SMN ( )

- ( ) - Add Tube Size Code  
 1/8" - 20  
 1/4" - 40  
 3/8" - 60  
 1/2" - 80

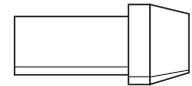

**Ferrule Sleeve**  
SSL ( )

1/16" tubing system components are available in the mini-fitting series starting on page 6. 1/16" tubing components can be used in 10V Series valves and fittings if required.

To ensure proper fit use Parker Autoclave Engineers tubing.

**Plug**  
SP ( )

Example: 1/4" SW Series Gland - SMN40  
 Note: Special material glands are normally supplied with four flats in place of standard hex.

## NACE/ISO 15156 Compatibility

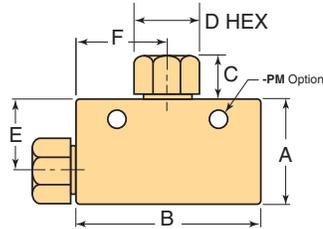

All PAE Low Pressure “Speedbite” Fittings and Tubing can be made with materials suitable for NACE/ISO 15156 requirements. As per NACE and ISO-15156, it is contingent on the end user to select this material. As this compatibility limits the use of “cold worked” materials, pressure reduction in MAWP can be expected. Please consult our Technical Brochure where we identify the more popular annealed materials along with the pressure reduction. Our Sour Oil and Gas brochure has a more complete description of the available options for pressures up to 30,000 psi.

NACE Suffix adder options:

“-SOG” suffix is used along with optional material to generate a hardness verification of pressure containing parts to generate a NACE certificate of compliance.

# Fittings and Tubing

## Low Pressure Tubing - Pressures to 15,000 psi (1034 bar)

Parker Autoclave Engineers offers a complete selection of annealed, seamless stainless steel tubing designed to match the performance standards of Parker Autoclave Low Pressure valves and fittings. This tubing is manufactured of UNS S316/S31603, 316/316L Stainless Steel and furnished in random lengths between 20 feet (6 meters) and 26.5 feet (8 meters). In order to ensure proper sleeve “bite” into tubing, Parker Autoclave Engineers specifies and controls the strength and hardness levels of both the tube and sleeve materials.

### Inspection and Testing:

Parker Autoclave Engineers annealed low pressure tubing is inspected for compliance with specified defect restrictions as well as carburization or intergranular carbide precipitation. The tubing outside diameter and wall thickness is controlled within close tolerance to assure proper fit. Sample pieces of tube (for each lot) are tested to confirm mechanical properties for proper compression sleeve “bite” and pressure capability. Furthermore, the sample tubes are pressure tested as a final check.

### Special Material:

In addition to the type 316/316L stainless steel tubing in the annealed condition listed in this section, Parker Autoclave Engineers has a limited stock of hard-to-obtain shorter lengths of the following tubing materials:

Monel\*, Inconel 600\*, Titanium Grade 2\*, Hastelloy C276\*, Inconel 625\*, and Incoloy 825\* (See Technical Catalog for additional information)

**Note:** \* Trademark names, Please consult factory for stock availability. NACE MR0175/ISO 15156 Options are available. Consult Factory.

### Tubing Tolerance:

Nominal Tubing Size inches	Tolerance/Outside Diameter inches (mm)
1/16	.064/.062 (1.62/1.57)
1/8	.128/.125 (3.25/3.18)
1/4	.254/.250 (6.45/6.35)
3/8	.379/.375 (9.74/9.53)
1/2	.505/.500 (12.83/12.70)

Tubing Details: 316/316L, UNS S31600/S31603 Stainless Steel (Annealed) to commercial OD sizing tolerances

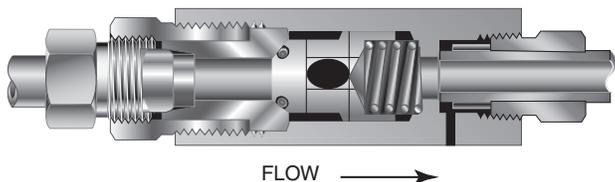

\*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change.

For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

# Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

**SWO Series O-Ring Check Valve**

Provide unidirectional flow and tight shut-off for liquids and gases with high reliability. When differential drops below cracking pressure, valve shuts off. **(Not for use as relief valve.)**

## Temperature Ranges:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)  
 Buna-N O-ring (-**BO** suffix): 0° to 250°F (-18° to 121°C)  
 FFKM O-ring (-**KO** suffix): 30° to 500°F (-18° to 260°C)  
 PTFE O-ring (-**TO** suffix): -100° to 400°F (-73° to 204°C)  
 PTFE O-ring with Low Temp Spring (-**LTTO** suffix): to -100°F (-73°C)

**Cracking Pressure:** 20 psi (1.38 bar) ±30%. Springs for higher cracking pressures up to 100 psi available on special order for O-ring style check valves only.

**Installation:** Vertical or Horizontal as required. Flow Direction Arrow marked on valve body.

**CAUTION:** While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring. FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

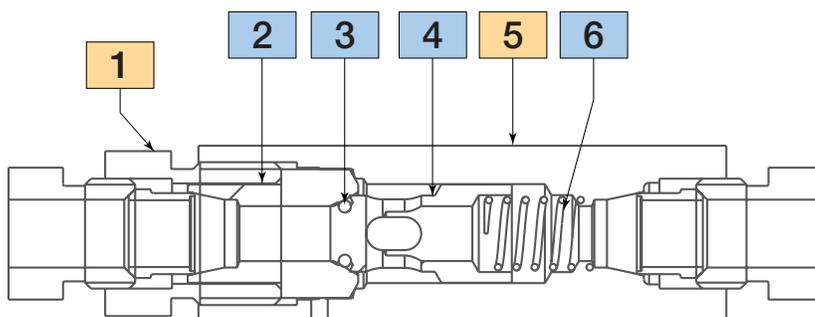

## Material of Construction:

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	O-ring	FKM
4	Poppet	316 SS
5	Body	316 SS
6	Spring	302 SS

Typical spare parts found in Repair Kits

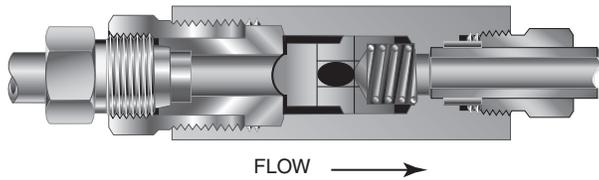

### O-Ring Check Valve Repair Kits:

Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RSWO8800)  
 See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

# Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

**SWB Series Ball Check Valve**

Prevent reverse flow where leak-tight shut-off is not mandatory. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 650°F (343°C). See Technical Information section for connection temperature limitations. **(Not for use as relief valve.)**

**Ball and poppet are an integral design** to assure positive, in-line seating without “chatter”. Poppet is designed essentially for axial flow with minimum pressure drop.

**Cracking Pressure:** 20 psi (1.38 bar) +/- 30%  
Optional cracking pressures **NOT** available in Ball Style Check Valves

**Temperature:** Minimum operating temperature for standard ball check valves 0°F (-17.8°C). For low temperature option to -100°F (-73°C) add suffix **LT** (Low temperature spring).

**Installation:** Vertical or Horizontal as required. Flow Direction Arrow marked on valve body.

**NOTE:** For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

## Material of Construction:

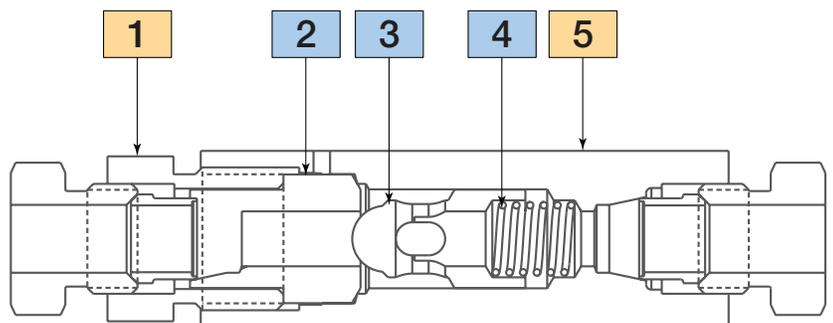

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	Poppet	316 SS
4	Spring	302 SS
5	Body	316 SS

Typical spare parts found in Repair Kits

### Basic Ball Check Valve Repair Kits:

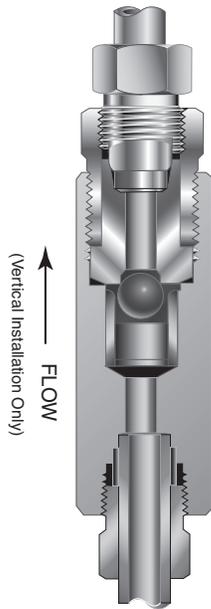

Check Valves are easily repaired. Add “**R**” to front of valve catalog number for proper repair kit (example: RSWB6600)

See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

# Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

**SWK Series Ball Type  
Excess Flow Valves**

Protects pressure gauges and pressure instrumentation from sudden surges in flow or venting in the event of line failure.

**Vertical Installation:** Since this type of check valve employs a non-spring loaded ball, valve **MUST** be installed in **VERTICAL** position with arrow on valve body pointing **UP**. (cover gland up).

**Resetting Valve:** Equalize the pressure across the ball. The ball will drop and reset automatically.

**Temperature:** Operating temperature for standard ball excess flow valves -100°F to 650°F (-73° to 343°C).

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

## Material of Construction:

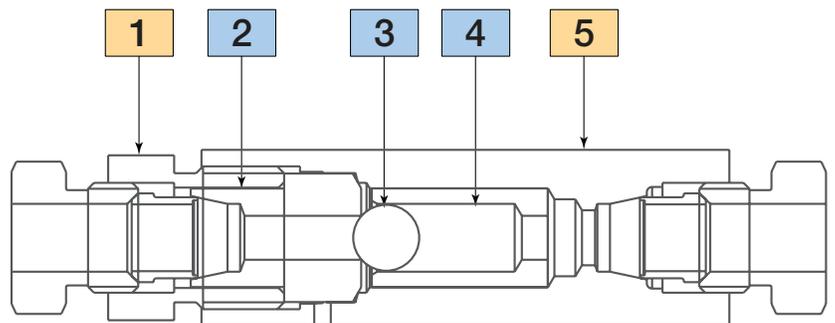

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	Ball	302 SS
4	Sleeve	316 SS
5	Body	316SS

Typical spare parts found in Repair Kits

### Ball Type Excess Flow Repair Kits:

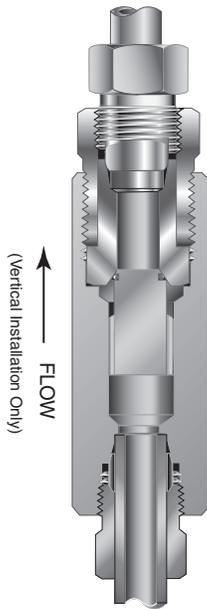

Excess Flow Valves are easily repaired. Add “**R**” to front of valve catalog number for proper repair kit. (example: RSWK8802)

See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

# Fittings and Tubing

Low Pressure Check Valves - Pressures to 15,000 psi (1034 bar)

**SWK0 Series O-Ring Type  
Excess Flow Valves**

Protects pressure gauges and other pressure instrumentation from sudden surges in flow due to operator error or line failure. This valve provides dependable, tight shut-off.

**Vertical Installation:** Since this type of check valve employs a non-spring loaded poppet, valve **MUST** be installed in VERTICAL position with arrow on valve body pointing UP. (cover gland up).

**Resetting Valve:** Equalize the pressure across the poppet. The poppet will drop and reset automatically.

### Temperature Ranges:

Viton (FKM) O-ring (std.): 0° to 400°F (-18° to 204°C)  
 Buna-N O-ring (-BO suffix): 0° to 250°F (-18° to 121°C)  
 PTFE O-ring (-TO suffix): -100° to 400°F (-73° to 204°C)

**CAUTION:** While testing has shown O-Rings to provide satisfactory service life, both cyclic and shelf life may vary widely with differing service conditions, properties of reactants, pressure and temperature cycling and age of the O-ring. FREQUENT INSPECTIONS SHOULD BE MADE to detect any deterioration, and O-rings replaced as required.

**CAUTION:** See Tubing section for proper selection of tubing.

(See “Technical Brochure” for Pressure/Temperature effect on temperatures above ambient.)

## Material of Construction:

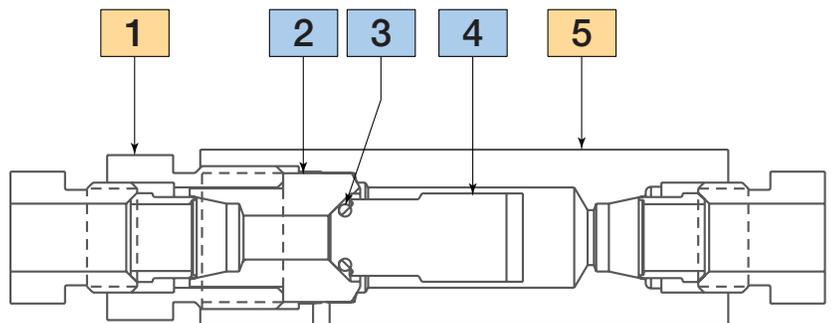

Item #	Description	Material
1	Gland Nut	316 SS
2	Cover	316 SS
3	O-Ring	FKM
4	Sleeve	316 SS
5	Body	316SS

Typical spare parts found in Repair Kits

### O-Ring Excess Flow Valve Repair Kits:

Excess Flow Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RSWKO6600)

See “Cover Torque” on page 14 for re-assembly. Include any catalog number suffix marked on original part when ordering repair kit.

**Note:**

All check valves are furnished complete with connection components unless otherwise specified.

† Check Flow\*\* - water, GPM

†† Check Flow\*\* - CFM, nitrogen @ 500 psi (34.47 bar), RT

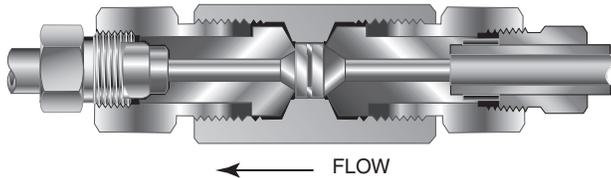

\*\* - For flow using alternate fluids, consult Parker Autoclave Engineers.

\*Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave stocks select products. Consult your local representative.

**Check and Excess Flow Valves**

# Fittings and Tubing

**Low Pressure Line Filter** - Pressures to 15,000 psi (1034 bar)

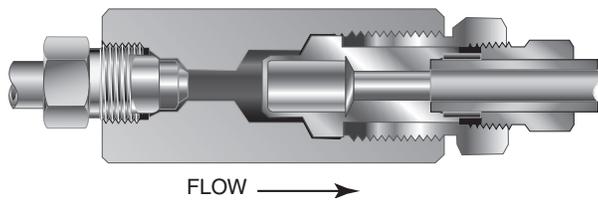

**SLF Series Dual Disc Line Filters**

Dual-Disc Line Filters are utilized in numerous industrial, chemical processing, aerospace, nuclear and other applications. With the dual-disc design, large contaminant particles are trapped by the upstream filter element before they can reach and clog the smaller micron-size downstream element. Filter elements can be easily replaced.

## Materials:

Body, Cover, and Gland Nut - CW 316 Stainless Steel

**Filter Element:** 316L Stainless Steel, Sintered Disc Type  
Downstream/upstream micron size 35/65 is standard. 5/10 or 10/35 also available when specified. Other element combinations available on special order.

**SWF Series Cup Type Line Filters**

High Flow Cup-Type Line Filters are recommended in low pressure systems requiring both high flow rates and maximum filter surface area. Widely used in the industrial and chemical processing fields, the cup design offers as much as six times the effective filter area as compared to disc-type units. In addition, the filter elements can be quickly and easily replaced.

## Materials:

Body, Cover, and Gland Nut - CW 316 Stainless Steel.

**Filter Element:** 316L Stainless Steel, Sintered Cup Type.  
Standard elements available in choice of 5, 35 or 65 micron sizes. **Note:** Filter ratings are nominal.

**Spare Parts:** Filter Elements are only replaceable part with either filter type. See chart on page 14 for Filter Element part numbers.

**Temperature Range:** Both Models -100° to 650°F (-73° to 343°C). (See "Technical Brochure" for Pressure/Temperature effect on temperatures above ambient.)

NOTE 1: All filters furnished complete with connection components unless otherwise specified. All dimensions for reference only and subject to change. For optional materials, see Needle Valve Options section

NOTE 2: Parker Autoclave Engineers disc and cup type filters are designed to filter small amounts of process particles. It is recommended that all fluids are thoroughly cleaned prior to entering the higher pressure system.

NOTE 3: Special material filters are normally supplied with four flats in place of standard hex.

NOTE 4: Pressure differential not to exceed 1,000 psi (69 bar) in a flowing condition. Filter replacement is recommended.

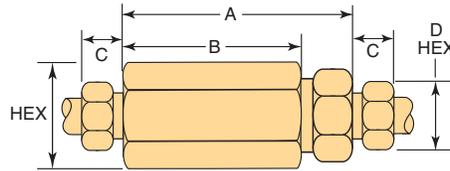

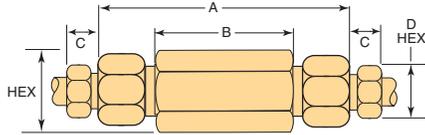

NOTE 5: Larger micron size filter element is installed on the upstream (inlet) side.
